VIPRE[®] Business

Low-Resource Enterprise Antivirus & Endpoint Protection

With its next-generation technology, VIPRE means powerful protection against today's highly complex malware threats. No more sluggish PCs, system slowness, and resource headaches of older antivirus programs! VIPRE is in a league of its own when it comes to antivirus software; VIPRE is clearly one of the best antivirus program available today.

StorageCraft Technology Corporation is focused on providing innovative disk-based backup, disaster recovery, data protection, migration and security solutions for servers, desktops and laptops.

VIPRE 2012 Anti-Virus Home Edition

Antivirus and Antispyware Software in One!

As an IT administrator, you want enterprise antivirus that won't slow down your PCs. As threat vectors grow, many endpoint security solutions have evolved into resource hogs, commonly called "bloatware", which can render PCs virtually unusable. If you're still using Symantec or McAfee you know how slow scans can affect user productivity and threaten security measures. The Tolly Group has recently prepared a report comparing antivirus scanning performance and system resource utilisation among leading endpoint security vendors. The Tolly Group test found that Sunbelt Software's VIPRE Enterprise significantly outperformed Symantec and McAfee and provides: Lower CPU utilisation, Lower memory consumption, and Faster scanning speeds.

A little about Sunbelt Software

Sunbelt Software is a leading security software developer. VIPRE got 5 stars on Download.com. CounterSpy was rated #1 in the CNET March 2008 AntiSpyware Top 10. We have millions of users. Hundreds of thousands visit our site every month.

Sunbelt Software has best-of-breed, low-memory, next generation security tools that do not slow down your computer. VIPRE combines antivirus, antispyware, anti-rootkit, anti-malware and other security technologies into a seamless, tightly-integrated security solution. VIPRE delivers comprehensive security against today's highly complex spyware, viruses, and blended malware threats for superior PC and email protection.

- Does not slow down your PC
- All-new technology: antivirus + antispyware engine
- Advanced anti-rootkit technology
- Cutting-edge Proactive Protection
- Full protection against email-borne threats
- Ideal for Netbooks that need malware protection
- **No automatic credit card charge each year!**

VIPRE Antivirus + Antispyware is high-performance security software that doesn't slow down your PC like older, traditional antivirus products. VIPRE is the end of antivirus software as you know it.

Tired of that old antivirus program that makes your PC slow down to a crawl? Interrupting what you are doing with

slow scan times, causing problems and nagging you? Time for a change to next-generation antivirus + antispyware that IS NOT a resource hog!

High-performance, next-generation antivirus + antispyware software

VIPRE combines antivirus, antispyware, anti-rootkit and other technologies into a seamless, tightly-integrated product. Built with next-generation technology, VIPRE (Virus Intrusion Protection Remediation Engine) gives you powerful antivirus **and** antispyware software in-one that protects you against today's highly complex malware threats including viruses, adware, spyware and rootkits, without hogging your PC resources like many traditional antivirus products.

Checkmark Anti-Virus Certified

VIPRE is Checkmark Anti-Virus Desktop certified by West Coast Labs and will receive additional certifications through other certifying bodies in the coming months.

Does not slow down your PC!

User surveys show the biggest frustration with existing antivirus solutions is bloat and high resource usage. VIPRE's design is low on system resources and optimizes your overall PC user experience, keeping notification pop-ups and warnings to a minimum.

Includes Sunbelt's CounterSpy?

VIPRE includes CounterSpy's award-winning Active Protection technology. You can continue using CounterSpy (new versions will be made available), but if you want to save family budget, get rid of your old, resource-hungry antivirus program! Want to speed up your PC and save money? Ditch your bloated antivirus and get VIPRE now.

Real-time monitoring with Active Protection™

VIPRE's Active Protection delivers real time monitoring and protection against known and unknown malware threats. Active Protection works inside the Windows kernel (the core of the operating system), watching for malware and stopping it before it has a chance to execute on your system.

Full protection against email-borne threats

VIPRE includes comprehensive protection against email viruses, with direct support for Outlook, Outlook Express and Windows Mail; and support for any email program that uses POP3 and SMTP.

Advantages of VIPRE Antivirus + Antispyware

- High-performance threat protection with low impact on system resources
- Scans email for malware threats
- Kernel-level Active Protection guards you 24/7
- Advanced anti-rootkit technologies
- Small, regular definition updates greatly reduce update downloading time
- VIPRE has three extra bonus tools: a history cleaner, a secure file eraser, and the PC Explorer for advanced users.

Vipre 2012 Premium

What's New In The Premium version?

We have kept all the strong points of VIPRE antivirus + antispyware and we added a leading edge, super low-overhead 2-way firewall that supports all Windows flavors and works both on 32- and 64-bit Windows XP, Vista and Windows 7. It's so small you won't notice it is running. To make sure your PC is fully protected, we also added Intrusion Prevention, malicious link filtering and much more. This is all you need for your PC Internet Security, and with that you deserve better tech support.

STORAGECRAFT. SHADOWPROTECT 4 DESKTOP

Fast and Reliable Disaster Recovery, Data Protection and System Migration for Windows Desktops and Laptops. Avoid System and Data Loss with ShadowProtect Desktop.

[Download the Data Sheet](#)

[Flash Tour](#)

[White Paper](#)

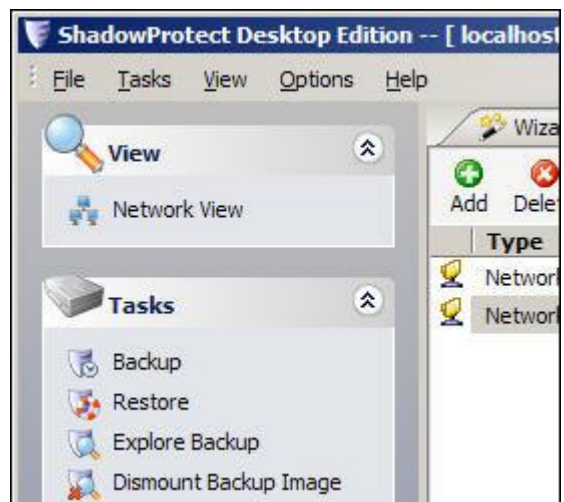

User Guides:

[Desktop User Guide](#)

[Recovery CD User Guide](#)

[ImageManager User Guide](#)

Protecting personal computers is a business-critical priority for today's corporations. ShadowProtect Desktop provides fast and reliable disaster recovery, data protection and system migration to get desktops and laptops online as quickly as possible.

ShadowProtect includes bare metal recovery to the same system, dissimilar hardware or to and from virtual environments. Protect everything on your desktops and laptops: operating systems, applications like Microsoft™ Office, configuration and personal settings and your data.

ShadowProtect gives you the tools you need to centrally manage your point-in-time backup images and restore them in a matter of minutes. The easy-to-use management console allows you to simultaneously push install ShadowProtect to all your Windows desktops and laptops from a central location and view the backup status of all protected Windows systems in your organization.

ShadowProtect provides you with VirtualBoot™ technology — for failover to a virtual desktop — as well as a virtual converter to convert ShadowProtect backup images into virtual machines.

ShadowProtect ImageManager™ allows you to consolidate point-in-time backup images on a daily, weekly and monthly basis for simplified management. Automatic verification and re-verification tools ensure your backups are in a known good state when recovery is necessary.

ShadowProtect Desktop and Protecting Your Business-Critical Systems

More and more businesses are becoming less centralized as workers increasingly rely on laptops as their computing environment. In addition, many small businesses are using desktops and laptops to run their organizations. Losing a system — whether to loss, theft, damage or malicious virus attacks — can be catastrophic to many businesses. That's why so many IT organizations are making data backup and disaster recovery a priority for their desktop computers.

ShadowProtect Desktop is an automated backup that works in the background. In the event of a disaster, its flexible recovery options allow you to complete granular recovery of files and folders or full bare metal recovery in a matter of minutes. Hardware Independent Restore (HIR) technology makes it quick and easy to recover to the same system, to dissimilar hardware or to and from virtual environments. ShadowProtect's HIR feature also makes system migration to a new desktop or laptop or consolidation to virtual environments a straightforward process.

ShadowProtect Desktop provides the following benefits:

- Rapid recovery from bare metal, to dissimilar hardware or to and from virtual environments.
- Centralized backup administration from a management console.
- ShadowProtect ImageManager to automatically consolidate backup image files.
- Verification and re-verification of backup images.
- VirtualBoot technology for quick failover to a virtual desktop.
- Converter tool to convert to .VHD or .VMDK.
- Automatic backup of your entire system.
- Granular recovery of individual files and folders in moments.
- Simplified migration to new Windows desktops or laptops.
- Scheduler for automatic full and incremental backups.

Backup - Fast and reliable disk-based backup that captures full, differential and incremental point-in-time backup images of your entire system. This includes the operating system, applications, configuration settings and data. Schedule full and incremental backups for automatic protection of everything on your Windows desktops and laptops.

Recovery - ShadowProtect provides rapid recovery a number of ways: full bare metal recovery through a bootable recovery CD; recover to similar hardware; or recover to dissimilar or virtual environments with Hardware Independent Restore (HIR).

File and Folder Recovery - Quickly browse to specific files and folders in your point-in-time backup images to perform granular recovery of your data.

VirtualBoot - Right-click any ShadowProtect Desktop point-in-time backup image and automatically boot it as a virtual machine.

Management Console - ShadowProtect's management console allows you to simultaneously push install ShadowProtect Desktop to all of your Windows desktops and laptops. Check the status of your system backups, import or export system information and create groupings for simplified management.

Verification - ShadowProtect ImageManager also verifies and re-verifies backup image chains to ensure that your backup images are in a known good state for fast and reliable recovery should a disaster occur.

Virtual Converter - Take a ShadowProtect Desktop point-in-time backup image and convert it to a .VHD or .VMDK.

Notification - Track the status of backup jobs through the notification tools in ShadowProtect ImageManager. This features allows you to set e-mail and SMTP configurations so you can be notified of backup job success and failure automatically.

Consolidation - Automatically consolidate backup image files with ShadowProtect ImageManager. This minimizes backup storage consumption and streamlines backup image

 Low-Resource Enterprise Antivirus & Endpoint Protection

High performance, Business Antivirus and Endpoint Security

The GFI VIPRE Antivirus Business product line gives you seamless, tightly-integrated security solutions that deliver antivirus and antispyware protection, client firewall, and malicious website filtering technologies that protect against the ever-changing and sophisticated wave of malware in a comprehensive, highly efficient manner.

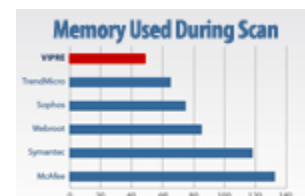

A different approach to malware protection

Today, traditional viruses make up only about four percent of the total current malware universe - and are relatively easy to detect and remove. Protecting against the new wave of malware that has emerged over the last five years requires a fundamental shift in how technology is engineered to stay one step ahead of organized cyber criminals. Given the need for increased threat protection, many vendors have responded by retooling their existing

antivirus products and adding new layers of antivirus capabilities, rather than building better, more efficient core code. The resulting solutions tend to be bloatware that dramatically impact system performance.

GFI's approach is different. We've translated our years of experience in researching, detecting, and remediating sophisticated malware into the next-generation endpoint protection technology, VIPRE -- without building on older generation antivirus engines or other sourced technology components. VIPRE Antivirus Business is fast, efficient technology in a single, powerful threat engine with low impact on system resources.

Why Choose VIPRE Antivirus Business?

- High-performance technology that won't slow down your users' PCs
- An easy-to-use management console that gets you up and running fast
- Low RAM usage and more efficient scanning intelligence than older tools
- Clean, fast, and powerful: Designed 'by admins for admins'
- Next-generation malware detection technologies protect against zero-day threats

Top Features

- Proprietary anti-malware detection engine uses next-generation technology
- Real-time monitoring and protection against zero-day threats
- Bi-directional firewall and web filtering in Plus version
- Integrated endpoint email security
- Real time live threat data integration
- Centralized management and easy deployment
- Powerful, scanning agent technology
- Advanced anti-rootkit technology
- Auto-scan removable drives

Other Features

- Scalable and flexible multi-site tiering model for large-scale deployments
- Integration for NAC support
- Support for MAC client

- Flexible reporting
- Role-based access control
- Policy-based management

GFI VIPRE Antivirus Business is available in two editions:

- **VIPRE Antivirus Business:** Includes antivirus and antispyware protection
- **VIPRE Antivirus Business Premium:** Includes antivirus, antispyware, firewall and malicious web filtering

The features below are available with both editions unless otherwise noted.

(Features available exclusively within a particular edition are listed further on in this page.)

Proprietary anti-malware detection engine uses next-generation technology

At VIPRE's core is an anti-malware engine that merges the detection of viruses, worms, spyware, Trojans, bots, and rootkits into a single efficient and powerful system. VIPRE Antivirus Business utilizes an advanced technology stack to perform high speed threat scanning to analyze large volumes of information for malware threats in a short period of time with limited performance impact on the end user's PC.

Real-time monitoring and protection against zero-day threats

VIPRE delivers real time monitoring and protection against known and unknown malware threats and leverages a number of proprietary malware detection methods, including dynamic code translation (the fastest method of file emulation), heuristics, behavioral analysis and traditional signature-based methods.

VIPRE analyzes the behavior of malware using the following technologies:

- **Active Protection™** – Real-time detection that works automatically inside the Windows kernel, watching for malware and stopping it before it has a chance to execute on a user's system. In addition, administrators can layer their own additional protection rules ("Monitors") to look for specific types of behaviour.
- **MX-Virtualization™ (MX-V)** - The built-in MX-V malware analysis technology rapidly analyses potential malware by observing its behaviour in a virtual environment so that malware is caught before it actually executes on a user's machine. Because MX-V uses the fastest emulation technique available, Dynamic Translation, it is extremely fast – able to do its work without compromising system performance. The integration of MX-V helps protect users from many unidentified or new variants of malware.
- **Genscan™ and Cobra™ heuristics** - Uses dynamic pattern assessment to determine if a sample is malware.

Integrated endpoint email security

VIPRE includes comprehensive protection against email viruses, with direct support for Outlook, Outlook Express and Windows Mail; and support for any email program that uses POP3 and SMTP. Additionally, the built-in anti-phishing feature blocks access to phishing websites by stripping out emails that contain phishing links.

Real time live threat data integration

VIPRE benefits from multiple sources for its threat definition updates with live threat data from GFI Labs integrated directly into VIPRE. GFI Labs processes tens of thousands of malware samples a day and leverages the following:

- **ThreatNet™** - GFI's user community of hundreds of thousands of VIPRE consumer users that anonymously send information on possible threats to GFI.
- **GFI CWSandbox™** - A leading automated malware behaviour analysis tool for fast and autonomous analysis of large volumes of malware samples.

- ThreatTrack™ - GFI Labs' data feeds that include the latest malicious URLs used to block bad websites and phishing emails.

Centralized management and easy deployment

VIPRE Antivirus Business is easy to manage and deploy with a simple-to-use platform that provides comprehensive and powerful endpoint protection for all managed desktops and corporate laptops.

- A single agent delivers antivirus and antispymware protection, with client firewall, intrusion prevention, and web filtering in the VIPRE Antivirus Business Premium version, all handled through a robust central management console.
- Access and control agent deployment, threat database updates, quarantined malware, configuration, agent policies, scan scheduling, and recommended actions to identified malware threats.
- Agents can be deployed using silent push install (using either WMI or RPC and admin shares), as an MSI file or a self-extracting executable, or auto-deployed through Active Directory or IP ranges and subnets.

Powerful, scanning agent technology

Superior scanning intelligence that is Checkmark Anti-Virus Desktop certified and VB100 certified. VIPRE delivers high detection rates and fast updates for new exploits.

Advanced anti-rootkit technology

Finds and disables malicious hidden processes, threats, modules, services, files or Alternate Data Streams (ADS) on a user's system.

Auto-scan removable drives

For self-running media such as USB drives, VIPRE scans autorun.inf and associated files, plus all files on any removable device when it is inserted.

Multi-site tiering model

Scalable and flexible multi-site tiering model for large-scale deployments enables distribution of IT workload, allowing regional IT staff to manage local incidents with a consolidated data view of all servers throughout your network. Control multiple physical locations by tiering at the policy level through granular role-based access control or multi-site configuration.

Role-based access control

Granular role-based permissions ensure appropriate access and control for all administrators by region, and function.

Policy-based management

Comprehensive policy creation and management functionality gives you flexibility to control scheduling of scans and all agent options.

Support for Mac Client

Support for Macintosh computers running Mac OS X versions 10.5 and 10.6. Designed with the Mac OS look and feel for an easy and positive user experience.

Flexible Reporting

The VIPRE Antivirus Business reporting features make it easy for administrators to schedule and customize its library of reports. A report scheduler allows you to easily schedule any report to run at a designated time with the ability to email reports to specified users; simplifying report distribution to management. Additionally, a stand-alone report

viewer enables you to provide executive management access to all data in any format without giving them access to the console or database.

Integration for NAC support

As an OESIS-OK Gold Certified product, VIPRE provides seamless integrated control and visibility from the gateway to the desktop when using any OESIS-enabled device, including the market-leading NACs and SSL VPN gateways from vendors such as Cisco, F5, Juniper, Microsoft, SonicWALL, HP, Dell, and TippingPoint.

Compatibility

VIPRE is compatible with Windows 2000, XP, Server 2003, Vista, Server 2008, Server 2008 R2 and Windows 7, 32- and 64-bit.

Ad Blocking		✓

Powerful endpoint protection - you choose which solution is right for your organization

Bi-directional firewall and web filtering in Premium version

The VIPRE Antivirus Business Premium edition delivers client firewall, host-based intrusion prevention (HIPS), network intrusion prevention (NIPS), and an intrusion detection system (IDS) that proactively protects against exploits and zero-day threats.

- Unique IDS functionality – Included in VIPRE are pre-defined IDS rules that are updated through VIPRE threat signatures. Administrators also have the ability to write detailed rules based on the Snort[®] language to complement their own security profile. Rules can be made to block admin-defined inbound or outbound traffic.

- Boot time firewall – The Boot Time feature allows administrators to limit access on a desktop to only certain network resources upon loading.
- Ad blocking – Automatically block third-party advertisements to reduce web page clutter.
- Script blocking – Optionally block Java script, VB scripts, and ActiveX controls.
- Bad URL blocking – Bad website blocking that uses the comprehensive ThreatTrack™ malicious URL feeds from GFI Labs™.
- Anti-phishing – Blocks access to known phishing websites by email or through the web browser.

CRN Software vendor of the year 2010

GFI Software provides the single best source of Web & Mail Security, Archiving & Fax, Networking & Security and Remote Monitoring & Management solutions software for small to medium sized businesses. With award-winning technology, an aggressive pricing strategy, and a strong focus on the unique requirements of small to medium sized businesses, GFI Software satisfies the needs of SMB organizations on a global scale. Founded in 1992, they have offices in USA, Canada, England, Scotland, Australia, Austria, Malta, Hong Kong and Romania which support more than 200,000 installations worldwide. GFI Software is a channel-focused company with over 10,000 partners throughout the world. GFI is also a Microsoft Gold Certified Partner.

Hosted Services

GFI MAX RemoteManagement

The Easy, Affordable System for IT Support & Managed Service Providers

Please [e-mail](#) us for quotes on GFI Remote Management Modules

GFI MAX RemoteManagement takes a more rounded approach to IT Support. With GFI's system, you'll be able to monitor your clients' RAID arrays, remote offices, ISP connection, bandwidth usage, their website - and their server. In short, it helps you monitor the key parts of their 'whole system' that cause the most grief - and alert you proactively so you can take better care of clients at less cost.

Features

Server Monitoring

Easily and effectively monitor and manage the health of one of the most critical business systems – the server. GFI MAX RemoteManagement Server Monitoring helps you avoid the risks of expensive remedial action and reputational damage through proactive monitoring of server security, hardware and disk, performance, applications and bespoke software. [Learn more](#)

Network Monitoring

GFI MAX RemoteManagement provides a comprehensive range of Network Monitoring and Performance Management solutions to help you manage network performance more effectively with SNMP monitoring, network device connectivity checks, TCP service monitoring and network security. [Learn more](#)

Website Monitoring

GFI MAX RemoteManagement Website Monitoring tools provide an easy-to-use and effective way of delivering maximum uptime; an invaluable low-cost solution for any business. [Learn more](#)

Workstation Monitoring

With GFI MAX RemoteManagement's Workstation Monitoring you can spot periodic workstation problems and fix them fast, ensuring optimum availability for all users and keeping business ticking along smoothly. [Learn more](#)

Patch Management

GFI MAX RemoteManagement's Security Patch Management is for Microsoft Windows and Office applications & Non Microsoft applications (such as **Adobe Reader, Adobe Flash Player, Mozilla Firefox, Mozilla Thunderbird, Java**). **Analysis, reporting & remediation.** [Learn more](#)

Reporting

GFI MAX RemoteManagement Reporting tools produce professional, graphical reports that you can use to spot trends in system performance and demonstrate the need for upgrades or replacements. [Learn more](#)

Total Systems Branding

The entire GFI MAX RemoteManagement system can be branded with your own logo and straplines, so you can impress users with 'your' advanced system and win more business. [Learn more](#)

Integration with a range of PSA, Help Desk, Ticketing and Other Systems

GFI MAX RemoteManagement Integration allows you to quickly and easily integrate your Professional Services Automation (PSA) tools, help desk, ticketing and other systems with GFI MAX RemoteManagement. [Learn more](#)

Remote Access

GFI MAX RemoteManagement's 'Take Control' feature allows one-click remote support for servers and workstations. Accessed through the dashboard, you can perform both attended and un-attended work on servers and workstations without leaving your desk. [Learn more](#)

Alerting and Viewing

GFI MAX RemoteManagement Alerting and Viewing options help you stay on top of the networks you manage round the clock, in a way that suits you best. Get alerted to issues with Instant Email and SMS Alerts the moment GFI MAX RemoteManagement detects a problem, and view the status of all your clients on the online Dashboard on your PC, a cell phone with the MiniDash™ view or on a large screen in your office with the WallChart. [Learn more](#)

Asset Tracking

With GFI MAX RemoteManagement's IT Asset Tracking you can perform automatic scans of your customers' networks. Fully integrated with your GFI MAX RemoteManagement Dashboard, you'll be able to view detailed information about your client's software and hardware assets from one single interface – wherever you are. Web & Mail Security

GFI MailEssentials

Anti-spam Solution for Exchange/SMTP/Lotus

GFI MailEssentials for Exchange/SMTP offers spam and phishing protection and e-mail management at server level. GFI MailEssentials offers a fast set-up and a high spam detection rate using Bayesian analysis and other methods - no configuration required, very low false positives through its automatic whitelist, and the ability to automatically adapt to your e-mail environment to constantly tune and improve spam detection. GFI MailEssentials also adds e-mail management tools to your mail server: disclaimers, e-mail archiving and monitoring, Internet mail reporting, list server, server-based auto replies and POP3 downloading.

Features

Top Features

- Support for Unicode
- SpamRazer™: an additional anti-spam engine boosting capture rate
- Greylisting
- Spam Quarantining

- Built-in Spam Reporting
- Automatic whitelist management to reduce false positives
- Multiple anti-spam technologies including Bayesian and IP filtering
- Eliminates hard to catch NDR, MSNBC and CNN spam
- Precise real-time dashboard

Other Features

- [FREEWARE version available](#)
- Server-based anti-spam and anti-phishing
- Downloads updates to spam profile database
- Localized into German, Spanish, Italian and Russian
- Protect your users against the menace of phishing emails
- Sort spam to users' junk mail folders
- Auto-log rotation
- List server for newsletter lists and discussion lists
- Easy tuning of the Bayesian engine via public folders
- Allow users to whitelist or blacklist via public folders
- Email header analysis and keyword checking
- Third party DNS blacklists (DNSBL) checking
- Support for multiple third party SURBL servers
- Automatic whitelist management reduces false positives
- Instant view of emails from new senders
- Eliminates directory harvesting
- Reports on spam filtering and email usage
- Support for SPF – the Sender Policy Framework
- Set priorities for each anti-spam module
- Company-wide disclaimer/footer/header text
- Email monitoring
- Email archiving to a SQL database
- Seamless integration with Exchange Server, Lotus Domino and other SMTP servers
- Support for virtual environments

GFI MailSecurity

Email Security for Exchange Server/SMTP/Lotus

GFI MailSecurity for Exchange/SMTP is an e-mail content policies, exploit detection, threats analysis and anti-virus solution that removes all types of e-mail borne threats before they can affect your e-mail users. GFI MailSecurity's key features include multiple virus engines, to guarantee higher detection rate and faster response to new viruses; e-mail content and attachment checking, to quarantine dangerous attachments and content; an exploit shield, to protect against present and future viruses based on exploits (e.g., Nimda, Bugbear); an HTML Sanitizer, to disable HTML scripts; a Trojan & Executable Scanner, to detect malicious executables; and more.

Features

Top Features

- Virus checking with multiple virus scanning engines
- Scan for trojans and executables
- Email Exploit Detection and HTML Email Sanitization
- Granular user-based attachment and email content filtering

Other Features

- Norman Virus Control and BitDefender virus engines are included
- Kaspersky, McAfee and AVG virus engines (optional)
- Sandbox
- Automatic removal of HTML scripts
- Spyware detection
- Advanced link scanning (included with the optional AVG virus engine)
- Attachment checking
- Multiply the value of GFI MailSecurity™ with powerful reporting
- Custom quarantine filters
- Enable easy quarantine folder monitoring through RSS feeds
- Web-based configuration enables remote management from any location
- Approve/reject quarantined email using the moderator client, email client or web-based moderator
- Searching within quarantined emails
- Full threat reporting for quarantined emails
- Support for virtual environments

GFI WebMonitor

Web Security, Monitoring & Internet Access Control

GFI WebMonitor is a utility for Microsoft ISA Server that allows you to monitor the sites users are browsing and what files they are downloading - in REAL TIME. In addition it can block access to adult sites as well as performing anti-virus scanning on all downloads. GFI WebMonitor is the perfect solution to transparently exercise a degree of access control over users' browsing habits and ensure legal compliance - in a manner that will not alienate your network users!

Features

Top Features

- WebGrade™ Database coverage of 205m URLs
- WebGrade Online lookups
- User/Site bandwidth monitoring
- Top Policy Breakers
- WebFilter policy exceptions
- MSN control
- Phishing Site Protection
- User/Group/IP based download control policies
- Time-based filtering
- Scan downloaded files with multiple antivirus engines
- Monitor or block a connection in real-time
- Control which file types users can download

Other Features

- Block applications' hidden downloads
- Hidden Downloads Monitoring
- Monitor bandwidth
- Allow exceptions through whitelist and blacklists
- Anti-phishing controls
- Security controlled access to the configuration and monitoring interfaces
- Antivirus protection through Norman Virus Control and BitDefender
- Malware protection (trojans, spyware, etc) blocking via Kaspersky - optional
- Protect against socially engineered phishing websites
- Our product will help you to mitigate legal liability
- Support for virtual environments

WebMonitor for ISA UnifiedProtection

GFI WebMonitor for Microsoft ISA Server is a utility that allows you to control internet access. The UnifiedProtection edition features URL filtering, website categorisation, anti-virus, anti-phishing and spyware detection. WebMonitor is the perfect solution to transparently exercise a degree of access control over users' browsing habits and ensure legal compliance, in a manner that will not alienate your network users. This is a subscription based service that must be maintained to continue using the product. Includes anti-virus updates for Norman and BitDefender engines.

Archiving & Backup

GFI Backup

BUSINESS EDITION

Easy-to-use Business Backup Software with Effortless Restore

GFI Backup Business edition provides fast and efficient data backup and synchronisation for network environments, with support for local, network, and removable media, plus FTP for off-site backup. Administration is handled through a web-based console, and administrators can configure and implement company-wide backup policies in a single task. Additionally, individual users can create their own backup tasks to run over and above the company default, and automatically synchronise their files and folders across desktop workstations, laptops, servers, and external drives. Licensed per server being backed up.

Features

Top Features

- Fast, efficient, full-featured backup, restore and synchronization solution
- Back up to all popular storage devices; plus offsite backup storage via FTP
- Centralized web-based administration interface
- Single backup task functionality which applies to all your web, SQL, file servers, etc.
- Enables an effortless, fast restore thanks to its use of non-proprietary standard Zip archives
- Ease of configuration and maintenance
- Ability to restore file to alternative location
- Daily activity email digests showing number of tasks/successes/failures
- Support for Unicode
- Compression and encryption support – AES 256 bit
- Simple to understand and effortless to deploy and use

Other Features

- Locked file support via [VSS](#) and scheduling
- Support for both 32 and 64-bit platforms
- Pre-defined searching filters
- Detailed event logs of all backup operations

GFI MailArchiver

Exchange Server Email Archiving, Management and Compliance

GFI MailArchiver for Exchange is an easy-to-use email archiving solution that enables you to archive all internal and external mail into a single SQL database. Now you can easily fulfill regulatory requirements (such as the Sarbanes-Oxley Act) AND provide users with easy, centralised access to past email via a web-based search interface. GFI MailArchiver for Exchange leverages the journaling feature of Exchange Server 2000/2003 and therefore provides unparalleled scalability and reliability at a competitive cost. Exchange Server journals all mail to a particular mailbox, after which GFI MailArchiver retrieves the mail, compresses the attachments and archives them to Microsoft SQL server. For licensing purposes, MailArchiver counts all users in the Active Directory (AD) domain that have email addresses. You can exclude specific mailboxes in the MailArchiver console to reduce the number of licenses needed.

Features

Top Features

- Outlook integration – with industry leading stub-free technology
- Exchange email archiving and integration with Other Email Servers
- Automatically archive corporate email into one storage area
- Migrate old PST files stored on client machines
- Helps comply with Sarbanes-Oxley Act, other acts and regulations

Other Features

- Multi-lingual Support for indexing emails
- Multiple database support and 'automatic' database management support
- Reduce email storage requirements
- Set up email retention and categorization policies
- Give viewing rights and exempt users from archiving email
- Collect and archive emails in one geographical location
- Audit your archived email to ensure they have not been tampered
- Access emails from any location through a browser
- Advanced email search and 'Saved Search' capabilities
- OneClick Restore a single email to a mailbox
- Support for virtual environments
- [...and more.](#)

GFI FAXmaker

Network Fax Server Software for Exchange/SMTP/Lotus

GFI FAXmaker for Exchange/SMTP is the leading network fax server. It integrates with Exchange Server, Lotus Notes and popular SMTP servers, allowing users to send and receive faxes and SMS/text messages directly from their e-mail client. By leveraging your e-mail infrastructure and Active Directory, GFI FAXmaker achieves unparalleled scalability, reliability and hassle-free administration. GFI FAXmaker has won the Windows IT Pro Magazine (formerly Windows & .NET) Readers' Choice Award for 3 years running.

Features

Top Features

- Supports Microsoft Exchange, Lotus Domino and other SMTP servers
- Fax over IP (FOIP) support
- Supports Lotus Notes & SMTP/POP3 servers
- Automated fax delivery/inbound fax routing
- SMS/texting gateway allows users to send SMS/text messages from their desktop

Other Features

- Active Directory integration reduces administration
- Multiply the value of GFI FAXmaker with powerful reporting
- Supports multiple mail servers & clustering
- Robust & scalable multi-line fax server
- Native ISDN support
- Archive faxes to GFI MailArchiver™, to SQL, or other archiving solution
- Optional OCR reading & routing module
- Junk fax filter
- Send faxes from any application
- Receive faxes in your email client – in fax or PDF format
- Allows you to send/receive faxes via your handheld or mobile
- Supports Outlook Contacts
- Attach Office documents, PDF, HTML and other files
- Automatic application integration & mail merges with NetPrintQueue2FAX
- Fax broadcasting using Microsoft Office mail merge
- [...and more.](#)

Networking & Security

GFI EventsManager

Event Log Monitoring, Management and Archiving

GFI EventsManager is an easy to use events management solution that monitors, archives, processes and reports on events collected from various log types including Windows events, W3C and Syslog. It boasts the most advanced event processing and filtering rules in the industry and includes vast reporting capabilities which will decipher the complex activity logs from servers, routers, firewalls, active directory and more, presenting you with exactly the right information you need to effectively monitor and manage your entire network.

Features

Top Features

- Improved installation and usability
- Analysis of Event Logs including SNMP Traps, Windows Event logs, W3C logs, SQL Server audit logs and Syslog
- Real-time alerts, SNMPv2 traps alerting included
- View reports on key security information happening now
- Centralized event logging
- Auto-archive all events into files
- One-click rule and filter creation
- Password Recovery
- Detection of Windows Events that Refer to Administrators
- **NEW!** GFI EventsManager Audit for Windows

Other Features

- Computer Discovery and Domain Synchronization
- Certified for Windows Server 2008; Supports Vista
- Deeper granular control of events
- Support for new devices
- SQL Server Auditing
- Translates cryptic windows events
- High performance scanning engine
- Collect events data distributed over a WAN into one central database
- Rule-based event log management
- Advanced event filtering features
- Event log scanning profiles
- Helps to comply with PCI DSS and other regulations
- Remove “noise” or trivial events that make up a large ratio of all security events
- Real-time 24 x 7 x 365 day monitoring and alerting
- Graphically monitor the status of GFI EventsManager and your network through the built-in status monitor
- Report scheduling and automated distribution via email
- Support for virtual environments

GFI LANguard

Network Security Scanner and Patch Management

GFI LANguard Network Security Scanner (N.S.S.) checks your network for possible security vulnerabilities by scanning your entire network for missing security patches, service packs, open shares, open ports, unused user accounts and more. With this information (displayed in customizable reports), you can easily lock down your network against hackers. GFI LANguard N.S.S. can also remotely deploy missing patches and service packs in applications and OS. GFI LANguard N.S.S. is the leading Windows security scanner and very competitively priced.

Features

Top Features

- Patch Management for Non-Microsoft Software
- Identify security vulnerabilities and take remedial action
- Automatic remediation of unauthorized applications
- Automatic deployment of network-wide patch and service pack management
- Easily analyze and filter scan results

Other Features

- Custom vulnerability checks
- Extensive, industrial-strength vulnerabilities database
- Ensures that third party security applications such as anti-virus and anti-spyware offer optimum protection
- Easily creates different types of scans and vulnerability tests
- Open ports: GFI LANguard scans for unnecessary open ports and checks that no port hijacking is in force
- Remote desktop connection
- Deploys custom or third party software and patches network-wide
- Extended hardware auditing facility
- Automatically receive alerts of new security holes
- Check if security auditing is enabled network-wide

- Scan and retrieve OS data from Linux systems
- Monitoring Dashboard
- Multiply the value of GFI LANguard with powerful reporting
- Helps to comply with PCI DSS and other regulations
- Support for virtual environments
- [...and more.](#)

GFI Network Server Monitor

Network Server Monitoring Software

GFI Network Server Monitor automatically monitors your network and servers for failures and allows administrators to fix and identify issues before users report them. Alerts can be sent by e-mail, pager or SMS. Actions, such as rebooting a machine, restarting a service or running a script, can be done automatically.

Features

Top Features

- Enterprise class architecture
- Includes checks for Exchange 2000/2003, ISA server, IIS and others
- Performs administrative steps to ensure that a service is running
- Takes corrective action automatically
- Alert notification via email, pager or SMS

Other Features

- Built-in computer monitor functions
- Built in Internet service functions
- Support for SQL Server/MS Access as a database backend
- Monitors terminal servers by actually logging in
- Monitor your database servers (SQL/ODBC)
- Monitor Linux servers
- View network status from anywhere in the world
- Monitor remote event logs
- Monitor processes, services performance and CPU usage
- Custom network monitoring using VBScript and SSH
- Monitor users, groups and other Active Directory information
- Competitively priced
- Nested folder support
- Configure maintenance periods to avoid alerts being sent during scheduled maintenance
- Advanced logging options to text file or event log
- Configure dependencies to avoid multiple alerts for error conditions dependent on each other
- Monitor network printer status
- Reporting – includes reports that detail the availability of your network resources; alternatively, use Crystal Reports to access the database and create your own reports
- Monitoring checks wizard that easily configures new checks for your present systems
- Accommodates employee shifts: GFI Network Server Monitor can notify different people depending on the time at which the check triggered
- Support for virtual environments
- [...and more.](#)

GFI EndPointSecurity

Control of USB Sticks, iPods and Other Endpoint Devices

GFI EndPointSecurity provides IT administrators with granular, network-wide controls for portable storage devices, removable media and a wide range of consumer electronic devices. To control access, GFI EndPointSecurity installs a small footprint agent on the machine. This agent is only 1.2 MB in size - the user will never know it is there. GFI EndPointSecurity includes a remote deployment tool based on GFI LANguard technology, allowing you to deploy the agent to hundreds of machines with just a few clicks. After installation, the agent queries Active Directory when the user logs on and sets permissions to the different nodes accordingly. If the user is not a member of a group that allows him/her access, then access to the device is blocked. Priced per computer being monitored.

Features

Top Features

- Controls user access and protects your network against the threats posed by portable storage media from a single location
- Logs the activity of portable storage media like USB memory sticks, SD cards and more
- Logs activity of who is saving what data to which device
- Easily configures group-based protection control via active directory
- Advanced granular access control, whitelists and blacklists
- Real-time status monitoring and real-time alerts
- Tamper-proof agent
- Supports BitLocker To Go encrypted devices
- Windows 7 Support
- No SQL Server licence required; SQL Express is auto-downloaded and installed, if desired

Other Features

- Provides full reports on device usage with the GFI ReportPack™ add-on
- Easy unattended agent deployment
- Permits temporary device access
- Scans and detects a list of devices that have been used or are currently in use
- Password-protected agents to avoid tampering
- Sends users custom popup messages when they are blocked from using a device
- Enables you to browse user activity and device usage logs through a backend database
- Allows you to delete information that is older than a certain number of days
- Supports operating systems in any Unicode compliant language
- [...and more!](#)

STORAGECRAFT SHADOWPROTECT 4 SERVER

Fast and Reliable Disaster Recovery, Data Protection and System Migration for Windows Servers. Maximize Business Continuity and Minimize Your Recovery Time Objective with ShadowProtect Server and ShadowProtect Small Business Server

One of the biggest challenges companies face is how to maximize business continuity and avoid business disruption following a server failure. ShadowProtect Server and ShadowProtect Small Business Server solutions provide fast and reliable disaster recovery, data protection and system migration to get servers online as quickly as possible.

ShadowProtect Server includes bare metal recovery to the same system, dissimilar hardware or to and from virtual environments. Protect your entire server environment including the operating system, applications like Microsoft™ Exchange and SQL, and your data.

ShadowProtect Server gives you the tools you need to centrally manage your point-in-time backup images and restore them in a matter of minutes. The easy-to-use management console allows you to simultaneously push install ShadowProtect to all your Windows servers from a central location and view the backup status of all protected Windows servers in your organization. In addition, ShadowProtect Server provides you with VirtualBoot™ technology — for failover to a virtual server — as well as a virtual converter to convert ShadowProtect backup images into virtual machines.

ShadowProtect ImageManager™ allows you to consolidate point-in-time backup images on a daily, weekly and monthly basis for simplified management. Automatic verification and re-verification tools ensure your backups are in a known good state when server recovery is necessary.

ShadowProtect Server and Your Recovery Time Objective

Your Recovery Time Objective (RTO) is the maximum amount of time your systems can be out of commission — from when a disruption occurs to the moment your system is available again. Minimizing your RTO helps you avoid the consequences of a break in business continuity.

The flexible recovery options in ShadowProtect Server allow you to improve RTO by reducing the time your systems and data are offline. ShadowProtect allows you to complete granular recovery of files and folders or full bare metal server recovery in a matter of minutes. Hardware

Independent Restore (HIR) technology makes it quick and easy to recover to the same system, to dissimilar hardware or to and from virtual environments.

ShadowProtect's HIR feature also makes system migration to new servers or consolidation to virtual environments a straightforward process.

ShadowProtect Server provides the following benefits:

- Rapid recovery from bare metal, to dissimilar hardware or to and from virtual environments.
- Centralized backup administration from a management console.
- ShadowProtect ImageManager to automatically consolidate backup image files.
- Verification and re-verification of backup images.
- VirtualBoot technology for quick failover to a virtual server.
- Converter tool to convert to .VHD or .VMDK.
Automatic backup of SQL, Exchange and other critical applications.
- Granular recovery of individual files and folders in moments.
- Simplified migration to new Windows servers.
- Scheduler for automatic full and incremental backups.

Backup - Fast and reliable disk-based backup that captures full, differential and incremental point-in-time backup images of your entire system. This includes the operating system, applications, configuration settings and data. Schedule full and incremental backups for automatic protection of everything on your Windows server.

Recovery - ShadowProtect provides rapid recovery a number of ways: full bare metal recovery through a bootable recovery CD; recover to similar hardware; or recover to dissimilar or virtual environments with Hardware Independent Restore (HIR).

File and Folder Recovery - Quickly browse to specific files and folders in your point-in-time backup images to perform granular recovery of your data.

VirtualBoot - Right-click any ShadowProtect Server point-in-time backup image and automatically boot it as a virtual machine.

Virtual Converter - Take a ShadowProtect Server point-in-time backup image and convert it to a .VHD or .VMDK.

Management Console - ShadowProtect's management console allows you to simultaneously push install ShadowProtect Server to all of your Windows servers. Check the status of your system backups, import or export system information and create groupings for simplified management.

Verification - ShadowProtect ImageManager also verifies and re-verifies backup image chains to ensure that your backup images are in a known good state for fast and reliable recovery should a disaster occur.

Notification - Track the status of backup jobs through the notification tools in ShadowProtect ImageManager. This feature allows you to set e-mail and SMTP configurations so you can be notified of backup job success and failure automatically.

Consolidation - Automatically consolidate backup image files with ShadowProtect ImageManager. This minimizes backup storage consumption and streamlines backup image management by providing consolidated daily, weekly and monthly backups.
